Official Lecture/Field Trip Attendance Record for Professional Development Hours

Tuesday, March 30, 2021

A database of borehole geophysical logs and other types of data files were compiled as part of studies of water availability and assessment of brackish- and saline-water resources (Williams and others, 2016). The database contains 4,883 logs from 1,248 wells in Florida, Georgia, Alabama, South Carolina, and from a limited number of offshore wells of the eastern Gulf of Mexico and the Atlantic Ocean. The logs can be accessed through a download directory organized by state and county for onshore wells and in a single directory for the offshore wells.

Lester J. Williams, 590 Gordon Rd. Apt C, Barnesville, GA 30204. Lesterw53679@gmail.com, B.S. 1986 and MS 1990 University of Louisiana at Lafayette.

Independent consulting hydrologist with a passion for developing sustainable groundwater resources for agricultural, industrial, and commercial supplies. Worked as a practicing hydrogeologist in the engineering/consulting field from 1990 to 2000 working on industrial and military sites investigating extents of contamination and developing corrective actions in North Carolina, South Carolina and Georgia.

Date of Lecture	Lecture Topic	Sponsor	Speaker	PDH Hours
3/30/21	Geophysical Log Database and Digital Surfaces for the Floridan Aquifer System in Florida and Parts of Georgia, Alabama, and South Carolina	AGS-No Sponsor	Lester J. Williams Hydrologist Barnesville, GA	1
